**GENERAL SELECTION GUIDE**

- Determine the bulb type which will be replaced.**  
*In this case it is the 3157 bulb.*
- Measure the approximate size of the lightbulb compartment with a ruler or tape measure.**  
*In this case, the measurement is 3.0 inches. Choose the Spiderlite with the next size down from the measurement which allows the arms to fully open inside this compartment. In this case, the small size at 2.74 inches would fit this application.*
- This application would take the 5 arm Wedge socket in the small size. Part# 5X2WR2**
- Follow the Spiderlite installation procedure.**

**DO NOT FIT CHART**

Spiderlite will NOT fit in taillights that do not have sufficient space for the arms to open fully. The chart below shows taillight housings that will NOT fit the Spiderlite.

**This chart is not all inclusive and is continuously updated. If your vehicle is not listed below, please refer to the General Selection Guide and the Selection Chart.**

**Notes:**

- 1156 and 1157 series sockets are generally used for vehicles model year 1998 and older.
- 3xxx series wedge sockets are generally for 1998 and newer domestically manufactured vehicles.
- 74xx series wedge sockets are generally for late model Japanese imports.
